TECHNOLOGY

LASER TECHNOLOGY

Granotel Displays Copenhagen **differs** by a very special engraving technique in the anodized signs. The technique makes text and graphics appear with a completely uniform and stylish surface as if written on a piece of paper, with an elegant and exclusive look as result. The method makes it possible to design the signs in a countless number of ways, and the sign series is therefore also a **tool to support the users' own branding**. In the silver-coloured sign **logo and text in colour** can be offered. The unique engraving technique leaves text and logo completely without glare, easy to see from all sides.
